## 2 EXECUTIVE SUMMARY

Growing cut flowers especially roses is a profitable business if done properly as they are the most traded flowers around the world,. Local demand for cut flowers is growing tremendously due to increased usage as decorative items in weddings, birthday parties, seminars, and other social gatherings.

In Pakistan, this sector has not gained its full potential yet. The major reason for slow development of this sector has been the lack of requisite technical knowledge on part of the farmers, traders and retailers. The credit goes to small farmers / entrepreneurs who have kept on going without much technical and / or financial support over the years.

Production of high quality fresh cut roses, requires proper green / poly house with a controlled environment. An important aspect of using a greenhouse is that high quality flowers can be produced all year round, irrespective of the weather changes. Use of green / poly house increases annual cut rose production three times as compared to open cut flower farms. Low cost of labor combined with reasonable land lease rates and a suitable climate for most part of the year makes investment in this business a lucrative proposition.

The cost for setting up the proposed green / poly house farm for fresh cut roses at 01 acres land is Rs. 7.64 million and will provide employment to 3 individuals in addition to seasonal labor for picking and pruning etc. The project is proposed to be financed through $50 \%$ debt and $50 \%$ equity. The project NPV is projected Rs. 4.07 million, with an IRR of $30 \%$ and a payback period of 3.74 years. The legal status of the business is proposed as 'Sole Proprietorship'.

## 3 INTRODUCTION TO SMEDA

The Small and Medium Enterprises Development Authority (SMEDA) was established in October 1998 with an objective to provide fresh impetus to the economy through development of Small and Medium Enterprises (SMEs).

With a mission "to assist in employment generation and value addition to the national income, through development of the SME sector, by helping increase the number, scale and competitiveness of SMEs", SMEDA has carried out 'sectoral research' to identify policy, access to finance, business development services, strategic initiatives and institutional collaboration and networking initiatives.

Preparation and dissemination of prefeasibility studies in key areas of investment has been a successful hallmark of SME facilitation by SMEDA.

Concurrent to the prefeasibility studies, a broad spectrum of business development services is also offered to the SMEs by SMEDA. These services include identification of experts and consultants and delivery of need based capacity building programs of different types in addition to business guidance through help desk services.

## 4 PURPOSE OF THE DOCUMENT

The objective of the pre-feasibility study is primarily to facilitate potential entrepreneurs in project identification for investment. The project pre-feasibility may form the basis of an important investment decision and in order to serve this objective, the document / study covers various aspects of project concept development, start-up, and production, marketing, finance and business management.

The purpose of this document is to facilitate potential investors in Green / Poly House Farm (Fresh Cut Roses) by providing them with a general understanding of the business with the intention of supporting potential investors in crucial investment decisions.

The need to come up with pre-feasibility reports for undocumented or minimally documented sectors attains greater imminence as the research that precedes such reports reveal certain thumb rules; best practices developed by existing enterprises by trial and error, and certain industrial norms that become a guiding source regarding various aspects of business set-up and it's successful management.

Apart from carefully studying the whole document one must consider critical aspects provided later on, which form basis of any Investment Decision.

## 5 BRIEF DESCRIPTION OF PROJECT \& PRODUCT

This pre-feasibility study is designed to provide information for establishing a fresh cut flower greenhouse farm for "Roses" at 01 acre of land. The land for the proposed farm is recommended to be purchased at an appropriate location as identified in the geographical potential section. In 01 acre of proposed land four green / poly sheds with each having '200 by 48 ' feet dimensions will be installed. The basic function of a green / poly house is to protect the plants from severe climatic conditions and provide favorable environment that is required for optimal production of the crop.

The basic structure of green / poly house is made of 'Galvanized Pipes' which is covered by 'Green Shade Net' in summer and 'Polythene Sheets' in winter. Galvanized Pipes have a useful life of 10 years, whereas 'Green Shade Net' and 'Polythene Sheets' have useful life of 05 years and 01 year, respectively.

The farm will have 12 thousand rose plants having productive life of 10 years. On average, maximum yield of one plant is approximately 180 flowers per year. Accordingly, the farm will have a total production capacity of 2.16 million flowers per year, however, for the first year farm productivity is assumed at $40 \%$. The cut flowers will be sold in the wholesale markets of the respective districts / metropolitan cities. Moreover, based on quality of flowers and efficient management of supply chain, export potential of cut rose flowers will also be tapped.

The cost of this project is Rs. 7.64 million, with Rs. 0.33 million for working capital and remaining Rs. 7.32 million as capital cost.

### 5.1 Production Process Flow

Purchase of Saplings and Transportation
Green/poly house \& Land preparation
Sowing

## Treatment with <br> life enhancing solution

## Picking, Washing and Cleaning

## Plant Management

## Visual Inspection and Packing

It is pertinent to highlight that picking of the flowers is the most important process as it plays vital role for determining the price of flowers. Following steps should be followed:

- Picking should always be done early in the morning.
- After picking wash the flowers in clean water.
- Flowers should be treated with life enhancing solutions to increase their life.
- Dry flowers with natural air after the use of preservatives.
- Inspect each flower for its quality then pack in wooden / cardboard boxes.
- Ready for delivery / distribution.

### 5.2 Installed And Operational Capacities

Four green / poly houses will be constructed for one-acre land with useful life of 10 years. On average there are 12,000 rose plants, which will be producing 2.16 million flowers per year, with adequate pruning, picking and delivery arrangements. However, 20\% of the total production goes to rose petals, hence, quantity available for sale, as rose petals would be 1,080 kgs from 432,000 flowers.

Capacity utilization during first year of operation is assumed to be at $40 \%$, whereas capacity utilization growth rate for subsequently years will be considered $20 \%$. The maximum capacity utilization is worked out at $80 \%$ in the $3^{\text {rd }}$ year of operation. This production capacity is estimated to be economically viable and justifies the capital as well as operational costs of the project.

The details of installed and operational capacities are provided in the table below:
Table 1: Installed and Operational Capacities

| Description | Installed <br> Capacity | Operational <br> Capacity <br> Year 1 (40\%) | Maximum <br> Capacity <br> Utilization (80\%) |
| :--- | :---: | :---: | :---: |
| Cut Flowers Produced (180 flowers <br> per plant, total plants 12,000) | $2,160,000$ | 864,000 | $1,728,000$ |
| Cut Flowers Lost to Petals (20\% of <br> flowers produced) | 432,000 | 172,800 | 345,600 |

## 6 CRITICAL FACTORS

The proposed project has following factors critical to success:

- Entrepreneur's knowledge, background and expertise in floriculture.
- Ability to identify and procure quality saplings from certified nurseries, preferably developing an in-house backup nursery.
- Availability / selection of suitable land and irrigation systems.
- Availability of trained farm labor for crop management and harvest.
- Forward linkages with the bulk buyers, and appropriate storage \& transportation services.

## 7 GEOGRAPHICAL POTENTIAL FOR INVESTMENT

Although Kasur and Sheikhupura districts of Punjab, Matiari \& Jhirk in Sindh and Swat and Quetta valley have developed some expertise in this field. However, as Pattoki still serves as the hub for floricultural trade in Pakistan, it is therefore considered the most appropriate location. All major cities of the country with comparable land and atmospheric conditions can be selected for establishment of this kind of business.

Patto 'mandi' is the major forum for buying and selling of fresh cut flowers, especially roses. Flowers are distributed to all parts of the country including Karachi, Peshawar, Lahore, and Islamabad from here.

There are few large players in this industry with an organized formal setup. Therefore, there is good potential to tap into this opportunity to start a cut flower business with a formal set up.

## 8 POTENTIAL TARGET CUSTOMERS / MARKETS

Potential markets for cut flowers (roses) are as under:

- Flower market such as Patto Mandi and Begumkot Mandi at Pattoki and Sheikhpura districts, respectively.
- Retail flower shops at major urban centers.
- Direct supply to corporate and institutional customers.
- Wholesales; bulk sales for social, cultural and religious events.

## 9 PROJECT COST SUMMARY

### 9.1 Project Economics

All the figures in this financial model have been calculated for estimated sales revenue of Rs.1.88 million in the year one. The capacity utilization during year one is worked out at $40 \%$ with $20 \%$ increase in subsequent years up to the maximum capacity utilization of $80 \%$.

The following table shows internal rate of return, payback period and net present value of the proposed venture.

Table 2: Project Economics

| Description | Details |  |
| :--- | ---: | ---: |
| Internal Rate of Return (IRR) | $30 \%$ |  |
| Payback Period (Yrs.) | 3.74 |  |
| Net Present Value (Rs.) | $4,070,401$ |  |
| August 2015 | 9 |  |

### 9.2 Project Financing

Following table provides details of the equity required and variables related to bank loan:

Table 3: Project Financing

| Description | Details |
| :--- | ---: |
| Total Equity (50\%) | Rs. $3,821,578$ |
| Bank Loan $(50 \%)$ | Rs. $3,821,578$ |
| Markup to the Borrower (\%age / annum) | $14 \%$ |
| Tenure of the Loan (Years) | 5 |

### 9.3 Project Cost

Following requirements have been identified for operations of the proposed business.

Table 4: Project Cost

| Capital Investment | Amount (Rs.) |
| :--- | ---: |
| Land | $2,200,000$ |
| Building / Infrastructure | 275,000 |
| Land Tillage and Saplings | $3,908,983$ |
| Furniture \& Fixtures | 105,000 |
| Green Shade Net | 312,000 |
| Polythene Sheet | 50,000 |
| Pre-Operating Costs | 465,333 |
| Total Capital Cost | $\mathbf{7 , 3 1 6 , 3 1 6}$ |
| Working Capital Requirement |  |
| Raw Material Inventory | 151,840 |
| Cash Requirement | 175,000 |
| Total Working Capital | $\mathbf{3 2 6 , 8 4 0}$ |
| Total Project Cost | $\mathbf{7 , 6 4 3 , 1 5 6}$ |

### 9.4 Space Requirement

A one-acre plot would be required for the proposed green / poly house farm. For growing of rose flowers, four green / poly sheds with each having '200 by 48 ' feet
dimensions will be installed, whereas a small storage room (around 250 sq . ft.) will also be constructed in the same plot. Although land is available on lease, but considering the amount of investment required for setting up a green / poly house it is better to own your own land. For this pre-feasibility study, the cost of 01 -acrre of land is estimated as Rs. 2,200,000. The overall cost of building for the proposed farm is as follow:

Table 5: Space Requirement

| Description | Area <br>  <br> (sq. ft.) | Per Unit <br> Cost (Rs.) | Total <br> Cost(Rs.) |
| :--- | :---: | ---: | ---: |
| Store for General Purposes | 200 | 1,000 | 200,000 |
| Flower Storage Room (Manual Cold <br> Store) | 50 | 1,500 | 75,000 |
| Total |  |  | $\mathbf{2 7 5 , 0 0 0}$ |

### 9.5 Green / Poly Houses

Installation of green / poly houses are the crucial inputs of this project. Green / poly house will have useful life of 10 years and it will provide controlled environment to rose plants. Green shade net can be used for all weather conditions, however polythene sheet is used only during winter season. Useful life of green shade net is 5 years while polythene sheet has 1 -year useful life. Major components of a green / poly house are:

- Galvanized Pipes
- Connecting Joints
- Installation Material (Cement, Crush, etc.)
- Green Shade net
- Polythene Sheet
- Water Pump with Water Tank

In this particular pre-feasibility study, it is recommended to install four green / poly houses on the acquired land; having the dimensions of "Length = 200 ft ", "Width = 48 ft " and "Height = 13 ft ". The proposed dimensions of green houses are easy to build and operate at small levels. The estimated costs of installation of green houses as well as rose sapling and land tillage costs are provided in the following table:

Table 6: Green / Poly House Requirement and Costs Description Unit Qty Unit Cost Total Cost

|  |  |  | (Rs.) | (Rs.) |
| :---: | :---: | :---: | :---: | :---: |
| Per Shed Infrastructure Cost |  |  |  |  |
| Galvanized Pipes (20 Feet Long) | No | 632 | 1,260 | 796,320 |
| Connecting Joints | No | 1 | 30,000 | 30,000 |
| Installation Material (Cement, Crush, etc.) | No | 1 | 10,000 | 10,000 |
| Installation Cost (Labor) | No | 1 | 37,500 | 37,500 |
| Sub Total |  |  |  | 873,820 |
| Green / Poly Shed Infrastructure Cost | No | 4 | 873,820 | 3,495,280 |
| Rose Sapling | No | 12,000 | 25 | 300,000 |
| Water Pump with Water Tank (Including Transformer and Installation Cost) |  | 1 | 30,000 | 30,000 |
| Farm Tools |  | 1 | 20,000 | 20,000 |
| Land Tillage | - | 1 | 25,000 | 25,000 |
| Contingency (1\% of Shed Infrastructure Cost) | - | - | - | 38,703 |
| Total |  |  |  | 3,908,983 |

### 9.6 Furniture \& Fixtures Requirement

Following table provides the list of tools, equipment and fixtures required for the proposed cut flower farm:

Table 7: Furniture \& Fixtures Requirement

Description
Qty.
Unit Cost (Rs.)
Total Cost
(Rs.)

| Deep Freezer | 1 | 50,000 | 50,000 |
| :--- | ---: | ---: | ---: |
| Air conditioner (1.5 tons Split) | 1 | 55,000 | 55,000 |
| Total |  |  | $\mathbf{1 0 5 , 0 0 0}$ |

### 9.7 Raw Material Requirement

On time irrigation, use of prescribed pesticides; fertilizers and proper weeding are essential for required output and continuous supply in the market. Following table shows raw material requirement for $2,160,000$ flowers on one-acre land:

Table 8: Raw Material Requirement

| Description | Annual Cost (Rs.) |
| :--- | :--- | :--- |
| Pesticide Sprays | 45,000 |
| Fertilizers | 35,000 |
| Water | 80,000 |
| Weeding | 40,000 |
| Total | $\mathbf{2 0 0 , 0 0 0}$ |

### 9.8 Human Resource Requirement

The table below provides details of human resource required to run the operations of proposed green / poly house farm smoothly:

Table 9: Human Resource Requirement

| Description | No. of <br> Employees | Monthly Salary per <br> person (Rs.) | Total Salary per <br> Month (Rs.) |
| :--- | :---: | :---: | :---: |
| Farm Manager | 1 | 25,000 | 25,000 |
| Workers | 2 | 12,000 | 24,000 |
| Total | $\mathbf{3}$ |  | 49,000 |

Weeding will be done from outsourced laborers whose cost is already mentioned in Raw Material Calculation table.

### 9.9 Other Costs

An essential cost to be borne by the farmer is the packing (which is assumed as Rs. 0.15 per flower) and transportation cost (which is assumed as $2 \%$ on sales) from farm to Mandi.

### 9.10 Revenue Generation

Based on the capacity utilization of $40 \%$ for fresh cut roses and flower petals respectively, sales revenue during the first year of operations is estimated as under:

Table 10: Revenue Generation - Year 1

| Description | Unit | Sale Price / Unit (Rs.) | First Year Production | First Year Sales Revenue (Rs) |
| :---: | :---: | :---: | :---: | :---: |
| Flowers with Stems | No of Flowers | 2.70 | 691,200 | 1,866,240 |
| Flowers as Petal | Kgs | 20 | 432 | 8,640 |
| Total |  |  |  | 1,874,880 |

## 10 CONTACT DETAILS

In order to facilitate potential investors, contact details of private sector Service Providers relevant to the proposed project be given.

## 13 KEY ASSUMPTIONS

### 13.1 Operating Cost Assumptions

| Description | Details |
| :--- | :--- |
| Transportation Expenses | $2 \%$ of Sales |
| Depreciation Method | Straight Line |
| Depreciation Rate | $10 \%$ on Furniture \& Fixtures |
|  | $100 \%$ on Office Equipment |
| Operating Cost Growth Rate | $10 \%$ |

### 13.2 Production Cost Assumptions

| Description | Details |
| :--- | :--- |
| Cost of Goods Sold Growth Rate | $10 \%$ |
| Electricity Cost | Rs. 8,000 per month |

### 13.3 Revenue Assumptions

| Description | Details |
| :--- | :--- |
| Growth in Sale Price | $10 \%$ |
| Production Capacity in First Year | $40 \%$ |
| Percentage Increase in Production Capacity every <br> Year | $20 \%$ |
| Maximum Production Capacity | $80 \%$ |
| Production Loss (Petals) | $20 \%$ of Production |

### 13.4 Financial Assumptions

| Description |  |
| :--- | :--- |
| Debt | $50 \%$ |
| Equity | $50 \%$ |
| Interest Rate on Debt | $14 \%$ |
| Debt Tenure | 5 Years |
| Debt Payment / Year | 1 |
